Weber improve the view

High performance monocouche render has been used on this stylish contemporary development. The boutique collection of five three-storey homes at Clevedon, command captivating views of the sea and Britain's only Grade 1 listed pier.

The properties were designed with crisp, contemporary lines so **weber.pral M** in Chalk was selected to complement this minimalist style which blends perfectly with the surrounding landscape. **weber.pral M** is hardwearing and very low maintenance which is ideal in this area of high exposure close to the sea.

weber.pral M is BBA approved and offers the multiple benefits of pump application and through-colour One Coat Technology which are recognised for their contribution to minimising programme works. By reducing the drying time by as much as 50%, when compared with a traditional two-coat system, on-site labour is dramatically reduced contributing to project efficiencies and faster completion.

"The location proved to be a challenge in a highly restricted residential area," comments Mark Pickthall of M P Plastering, "so speed was of prime importance. **weber.pral M** is quick and easy to apply and spray application ensured we kept ahead of programme targets over a tight eight-week build." A scraped finish has achieved an attractive decorative and durable finish.

weber.pral M has been awarded an A+ rating as defined in the BRE Global Green Guide to Specification. This audited material helps specifiers to make selections that will collectively reduce the environmental impact of their buildings while achieving a higher number of BREEAM materials specifications credits.
